

Iteration Plan - Iteration 1

September 10 - October 1

High Level Objectives

Documentation - Anthony

- * Iteration Plan
- * Domain Model Diagram
- * System Sequence Diagram
- * Design Document
 - * Iteration and class diagrams

Development - Adam

- * Deployment to Server
- * Register User
- * Login User
- * Manage User Account
- * Grant Admin Privileges
- * Import Data

Demo Working System

Evaluation Criteria

The work for this iteration is considered done when the application can successfully be deployed to the server. We should also be able to create and manage user accounts within the UI. A user should be able to be assigned as an administrator. Once the user is an admin, they should be able to import data into the system. This can be verified by manual tests of the UI. All features should be available for demonstration on Oct. 1, evoking a favorable response from the instructor and classmates from other teams.
